FALL PLANTING LIST

We offer upon the following pages a few specialties for fall planting. It has now become an assured fact that fall planting can be handled successfully. You gain practically a season's growth when you plant in the fall.

PRICES

The Fall gives us plenty of time in which to handle your business. Therefore we can afford to sell your stock at a better figure than in the spring of the year when the season is short and we are forced to go at a terrific pace to keep up with the work. When fall planting is employed all is changed. We can go ahead and take care of your orders as they come, and give them our best and most careful attention.

PACKING

Note, if you please, the extra quality of stock offered in large sized specimen Evergreens. Our stock of fine large trees is not surpassed by any other nursery firm in the country. Not alone have we the fine stock, but our years of experience have taught us the best and safest methods of handling this stock. Give us a trial order. All we ask is a chance. We have pleased others and we can do the same for you.

BALL AND BURLAP

Ball and Burlap is the term applied in connection with the digging of Evergreens, especially the larger sizes. It means simply that the trees are taken from the ground with the soil left clinging in a ball about their roots, and a piece of Burlap tied securely about the same to hold it in place. Trees handled in this manner seldom fail to do well. Not only do they live, but the first season after planting finds them with a fine strong growth. We take up your stock with every possible care. Big trees with Ball and Burlap without extra charge.

NO CHARGE FOR BOXING AND PACKING MATERIALS

TERMS OF SALE

Stock for fall shipment can be moved with safety after the wood has become thoroughly ripened.

Write the order plainly, giving P. O. address, together with the railroad office where stock is to be shipped.

State plainly whether you wish the goods sent by freight or express. All orders from unknown parties must be accompanied with cash, money order or draft.

All claims for errors must be made upon receipt of goods, that immediate attention may be given.

We extend a cordial invitation to you to come and visit the nurseries and inspect the stock. We have this season added extensive office buildings and packing plant, and are now situated better than ever to handle your business with care and dispatch.

ABIES CONCOLOR. White Fir. (See page 3.)

ABIES (Fir).—The Firs are all exceedingly hardy trees, and very rapid in growth. We offer here only some of our best varieties. We can furnish finely developed specimens of all the following varieties. Dug with ball and burlap.

ABIES CONCOLOR.—This beautiful tree is a native of the Rocky Mountains. Its long, soft, blue green foliage is very attractive, and it forms into fine large round specimens. We can furnish in this variety some extra select specimens taken with ball and burlap.

Concolor (Selects)	Each.	Dozen.

3 feet,	1 75	20 00
2½ feet,	1 50	12 00

ABIES DOUGLASII.—Another of the Rocky Mountain Evergreens. Our stock of this variety is very complete. We can furnish very select stock in sizes up to fifteen feet, all recently transplanted, and move with fine balls of earth upon the roots.

This tree gives the very best of results when transplanted in the fall. Extremely hardy and rapid in growth. Soft feathery foliage, with a pleasant fir odor. A most satisfactory tree in every respect.

Douglas Fir (Selects)	Each	Dozen

All dug with ball of earth and tied in burlap.

ABIES NORDMANIANA (Nordmans Fir).—Nordmans Fir is a native of Europe, where it forms one of the grandest specimens known in cultivation. We can furnish some fine round specimens up to four feet tall, all taken with ball of earth. Foliage dark green and soft.

Nordmans Fir	Each	Dozen
4 feet,	\$2 50	\$25 00
3 feet,	1 50	12 00

ABIES VEITCHI.—Abies Veitchi is one of the Japanese Firs well known and widely cultivated in this country. This variety can be highly recommended for specimen planting, or it may be worked in with other plants, forming a group, when the result is always satisfactory. Rapid in growth, with a well-formed body. The plant is always hardy, transplants easily and is one of the most satisfactory of our ornamental trees. The exposed portion of the foliage is bright green, while the under side of its needles retain a flashy blue,

which is very attractive when exposed in the sunlight.

Abies Veitchi	Each	Dozen
4 feet,	\$3 00	
2½ feet,	1 50	

JUNIPERUS VIRGINIANA (Glauca Silver Mountain Cedar).—This is one of the most sought for plants growing in American nurseries. Used for all landscape planting, and in ornamental work of all kinds. The graceful habit of growth together with its rich silvery coloring gives us a plant worthy of a place upon the most exclusive grounds.

We offer this wonderful little plant only in one foot and one and one-half foot sizes. All taken with ball of earth and sewed in burlap.

3 feet,	1 00	10 00

JUNIPERUS VARIEGATA (White Tipped Juniper).—A fine variety of grafted Juniper. Grows upright and conical in shape. Is valuable as an ornamental plant, and for this purpose can not be too highly recommended. The foliage is glaucous green, while the white tipped branches form a striking appearance. The plant is often used in groups to add life and color to an otherwise somber aspect. The White Tipped Juniper is hardy, and easy to transplant. Matures at the height of about 20 feet.

White Tipped Juniper	Each	Dozen
3 feet,	\$2 00	\$18 00
2 feet,	1 50	12 00

JUNIPERUS HIBERNICA (Irish Juniper).—Commonly known as Irish Juniper. One of the oldest best known of this family. In habit of growth it is very stiff and formal. It is very valuable as an ornamental tree. Very popular for cemetery planting. Where a stiff, clean-cut, formal Evergreen is desired, the Irish Juniper can always be recommended.

Irish Juniper	Each	Dozen
4 feet,	\$1 50	\$14 00
3 feet,	1 00	10 00

JUNIPERUS CANADENSIS PROSTRATA (Trailing Juniper).—The prostrate or trailing Juniper is a most valuable plant in many ways. Its habit of growth is trailing, or more properly speaking, creeping. In this manner it grows and often covers a space 12 to 15 feet in diameter. It is extremely hardy, and is not affected by the coldest of wintry weather. Dark green in color, changing to purplish in the winter season.

ABIES DOUGLASII. Douglas Fir. (See page 3.)

tall, 1½ feet spread, **\$1 00** Dozen
\$10 00

PICEA PUNGENS (Blue Spruce).—

The Dundee Nurseries have, for a number of years, given especial attention to the growing of this beautiful Evergreen. We grow them from seed collected in the Rocky Mountains. While the trees are small it is hard to select out the blue plants. When the tree has attained the height of 1 foot, its blue sheen first appears. From year to year these trees are moved about, transplanted and root-pruned. The trees showing the most pronounced blue color are then taken up and planted in the block called selects. Great care is used in handling and cultivating these plants, that each may some day develop into a perfect specimen. The Blue Spruce naturally forms a perfectly shaped plant, growing an abundance of heavy foliage, which, together with the nice round shape of the tree, and its rich blue coloring, makes it one of the most wonderful trees belonging to the coniferous group. We grow these trees in all sizes, the price being based upon the individuality of the plant. In the 4, 5, 6, 7 and 8 foot sizes we have beautiful specimens developed in every way, such stock as we feel proud to offer, as we know it will give abundant satisfaction to those who are in need of this wonderful tree. Your attention is again called to the variety of Blue Spruce listed under the heading (Green Specimens). These green types are the same variety as the blues, except that they do not show the blue color in its brightest tints. Some of the trees listed are green specimens, while some show dull blue, and some dark green, while still others are a bright, flashy green. These green trees are as finely developed in shape and form as the select blues, and are in many ways as much to be desired as the blues. In group planting they form a delightful contrast. They are valuable for heavy screens, wind-breaks or heavy border planting. All of the above described trees are carefully handled while being prepared for shipment. Each tree, after having its branches carefully gathered up and tied, so as not to become mutilated, is carefully dug with ball of earth left about the roots. Burlap is then securely tied around the earth.

Note.—To replant all large trees having a ball of earth, care should be taken to have the hole plenty large enough. Set the tree into the hole, after the burlap has been removed as carefully as possible. Always plant just a little deeper than the tree stood in the nursery. Tramp the soil firmly around the roots, and water well after the planting has been completed. Do not water until

all of the earth has been placed in the hole.

PICEA PUNGENS KOSTER'S (Grafted Blue).—

Koster's Grafted Blue Spruce are the grafted specimens. Only the very best blues are used for this purpose, and the result is that Koster's Blues are the very best and brightest color possible to produce. In hardiness, outline, etc., they are the same as Colorado Pungens. We offer the grafted specimens in all sizes. The very small plants show the same bright blue as do the older trees.

KOSTERIANA GLAUCA PENDULA (Koster's Weeping Blue Spruce).—

The Weeping Blue Spruce is another fine tree for ornamental planting. The drooping or weeping habit of growth forms a sharp contrast with the straight-growing Pungens. The Weeping Spruce are all grafted plants and come in only the best blue colors. These beautiful specimens are carefully handled from the time they come from the grafting bench. Each branch is trimmed and trained and made to grow to the best advantage. We offer our patrons a fine selection of this variety. All of our plants are well developed, and we feel sure that no finer stock can be found in the United States.

PICEA EXCELSA (Norway Spruce).—The Norway Spruce is one of the good old reliable sorts. Rapid in growth and always hardy, and may be used for any and all plantings. Does

Silver Mountain Cedar (Page 3).

well planted as a single specimen, and is equally as popular for heavy screens and hedging. It may be sheared into any desired form, and will grow very compact. Always covered with masses of bright green foliage. Transplants easily, and is a most satisfactory tree. We grow this variety in any and all sizes, and will furnish them in large quantities.

Norway Spruce	Each	Dozen
5 feet,	\$2 00	\$20 00
4 feet,	1 00	10 00
3 feet,	75	7 00

PICEA ENGLEMANI (Engleman Spruce).—*Picea Englemanni* is another of the Rocky Mountain Evergreens. Noted for its hardness and attractive appearance. In some respects it resembles the Blue Spruce, some of the trees showing a blue tint upon the foliage. A desirable tree for ornamental planting, forming a well-rounded body, well furnished with foliage, which is rather soft compared to the needles of the Pungsens. Transplants easily, and is considered a most satisfactory tree.

Engleman Spruce	Each	Dozen
3 feet,	\$3 00	\$30 00
2 feet,	1 50	15 00
1 foot,	75	7 00

PICEA EXCELSA INVERTA (Weeping Norway Spruce).—A remarkable member of the Spruce family, not alone on account of its peculiarly striking habit of growth, but the adaptability with which it fits into any well-planned planting. This tree is always hardy, transplants readily and is rapid in growth. The foliage is like that of the Norway Spruce, but its branches take a decided droop or weeping habit of growth.

Weeping Norway Spruce	Each	Dozen
3 foot,	\$2 50	
2 feet,	2 00	\$20 00

PICEA ALBA (White Spruce).—Our White Spruce is native of America, and one of the most valuable trees which we offer. Can be used for all practical purposes. It can not be surpassed when used for wind-break or heavy screen planting, and is considered one of our best kinds for ornamental grouping. It would be hard to secure a more pleasing effect than that which results from planting a group of White Spruce, allowing enough space for each tree to fully develop. The long graceful branches with their soft feathery foliage produce an effect hard to equal with any other variety. We have an excellent assortment of this variety, all well

formed, and will move with ball of earth. We feel safe in recommending this tree, as we know it to be a plant of merit.

4 feet,	2 00	20 00
3 feet,	1 00	10 00
2 feet,	75	7 50

PICEA NIGRA (Black Spruce).—Native of North America, extremely hardy and rapid in growth. Resembles in some respects the White Spruce. Very good for ornamental planting, forming into an attractive plant. Dark green foliage, with a slight luster to its foliage.

Black Spruce	Each	Dozen
7 feet,	\$3 00	
4 feet,	2 50	
3 feet,	1 50	\$15 00

PICEA (Black Hill Spruce).—In describing to my patrons the different varieties of Spruces, I wish to call particular attention to the Black Hill Spruce. This tree is considered by all nurserymen who have come into contact with it, to be one of the most wonderful and useful of the Spruce family. The very smallest trees of this variety soon form round, sturdy, compact bodies, and as the tree grows and develops it adds to this particular style of growth, and in most cases is found to be the most compact growing Evergreen belonging to the Spruce family. This tree is native to the Black Hills of South Dakota. The Dundee Nurseries have the only large-sized specimens offered for sale in the United States. Seldom in the history of nursery work have the merits of a single variety become so rapidly and universally recognized as those of the Black Hill Spruce. The hardness of the plant, even while very small, is surprising, not alone its power to withstand wintry freezes, but from the fact that it has never been known to scald or lose its color, as do some of the otherwise hardy kinds. The color of its foliage varies. Some are light green, some are dark, while still others have a dull blue, almost equal to that of the Engleman Spruce. The Black Hill Spruce transplants easily and soon becomes established in new soil and conditions. When planted as single specimens, this tree has no superiors, as it develops rapidly into grand specimens. Include a pair of Black Hill Spruce in your order and see for yourself what a fine plant this really is. While our stock is somewhat limited, we have to offer some choice trees. All come up with masses of

We Grow Small Seedlings by the Millions. Send for SEEDLING CATALOGUE if you are Interested.

PICEA ALCOQUIANA (Alcock's Spruce).—One of the Japanese variety which has proven itself hardy here upon our planting grounds, and is a tree we feel safe in recommending for all ornamental plantings. Beautiful, attractive and growing to good form. The foliage upon the upper and exposed side of the needle is bright green, the under side showing a bright, flashy blue.

Alcock's Spruce	Each	Dozen
3 feet,	\$2 50	
2½ feet,	2 00	

The Pines are all very satisfactory trees for fall planting.

PINUS MUGHO (Dwarf Mountain Pine).—You all know the pretty little dwarf Pine that forms such a bushy, compact little tree. This Pine is always very popular, because it can be put to such a variety of uses, always does well and never looks out of place. The Mugho Pine grows as broad as it does tall, and can be planted anywhere upon the lawn as it takes up so little space. Foliage dark, with long, stiff needles. We have a good number of well-developed plants of the Mugho Pine, all round and compact, as broad as they are high. You are sure to be pleased with this pretty little tree, so do not fail to include this variety in your order.

Dwarf Mountain Pine, 1 to 1½ feet, and 1 to 1½ feet broad,	Each	Dozen
1½ feet,	\$0 50	\$ 5 00
1 foot, 1 foot broad,	40	4 00

WHITE PINE.—The White Pine is one of our best trees of general use, can be used either as a single specimen or planted in groups. Always give the best of satisfaction when planted in groups. Our stock of this wonderful tree is extra fine. We can select excellent stock in any size and quantity. Let us figure upon a car lot of big White Pines taken with ball and burlapped. We burlap five and six foot, and all larger sizes. All several times transplanted and roots pruned.

Remember these prices hold good for fall only.

PINUS SYLVESTRIS (Scotch Pine).—Scotch Pines grow and develop into fine-shaped plants. They grow fast and are always hardy. Can be used in any style of planting with good results. For wind-break and shelter belts, where trees have to stand close together, the Scotch Pine can not be too highly recommended. Foliage long and heavy. We are pleased to offer our patrons a choice selection of this valuable variety. Our stock of Scotch Pines was never better than those which are growing upon our grounds this season. Stock that is bound to please.

8 feet (Light),	2 50	20 00
4 feet (Select),	60	6 00

THUYA OCCIDENTALIS COMPACTA (Compacta Arbor Vitæ).—Very pretty dwarf growing plant, which will mature at 4 to 6 feet in height. Foliage dark green and always compact and rounded in form. Its natural habit of growth is compact, and it does not have to be sheared or trimmed. Always hardy and a satisfactory plant for ornamental work.

Compacta Arbor Vitæ	Each	Dozen
2 ft., 1 to 1½ ft. broad,	\$1 00	
1 ft., 1 ft. broad,	50	\$5 00

THUYA OCCIDENTALIS PYRAMIDALIS (Pyramidal Arbor Vitæ).—Perhaps to the majority of planters the Pyramidal Arbor Vitæ is the most familiar of all the different plants belonging to this family. It is one of the old, well-known trees, having been grown and sold for many years. We aim to grow a large stock of the Pyramidal trees. They are always in demand, and to those who are not acquainted with its many good qualities, we feel safe in recommending this plant as a tree of sterling quality. The extreme hardness and adaptability to a variety of soils

ENGLEMAN'S SPRUCE. (See page 7.)

mark it as a satisfactory tree for practical uses. Its habits of growth are formal in the extreme. Growing tall and straight, plants at the height of 15 feet seldom measure 2 feet in diameter. Indispensable in all landscape plantings, and much used in thick massed groups, to break the monotony of a continuous sky-line. Our Pyramidal Arbor Vitæ are an exceptionally fine lot. Good, bushy, well-formed trees and all are moved with a ball of earth. This variety transplants so readily that one seldom fails, and they soon recover after setting.

Pyramidal Arbor Vitæ	Each	Dozen
5 feet,	\$2 50	\$25 00
4 feet,	1 50	15 00
3 feet,	1 00	10 00
2 feet,	50	5 00

THUYA OCCIDENTALIS (George Peabody's Golden Arbor Vitæ).—The Peabody Golden Arbor Vitæ is without question one of the most beautiful and attractive varieties we have to offer. Beautiful because of its bright golden color. Such an abundance of color is seldom borne upon a single plant, but this Peabody's Golden is a wonder. Clean cut and upright in habit of growth, easy to transplant and very hardy. Matures at 12 to 15 feet in height, and always retains its bright, attractive appearance. Plant a Peabody's Golden upon the lawn as a single specimen, or with other darker colored plants, and it will add life and brightness to its entire surroundings.

Peabody's Golden Arbor Vitæ	Each	Dozen
3 feet,	\$1 50	
2 feet,	1 00	
1 foot,	75	

THUYA OCCIDENTALIS GLOBOSA (Globe Arbor Vitæ).—Globe-shaped and dwarf in habit of growth. Very good for border planting or low hedging. This is another of those pretty little dwarfs that fit in so nicely anywhere and develop into round, compact specimens always fitting and attractive.

Globe Arbor Vitæ	Each	Dozen

NOTE.—Prices For Fall Delivery ONLY.

HEDGE PLANTS

We make a specialty of Hedge Plants, all sizes and varieties. Good hedges can be grown from any sized plants. Strong, healthy, young plants will soon develop into a well-formed hedge. When ordering stock for hedging always bear in mind the fact that it must be of a variety that will stand shearing, as the best results are obtained from the use of such stock. We mention here only a few of the most popular sorts, but many others are used and with good results.

PICEA EXCELSA (Norway Spruce).

—This tree gives excellent results when planted for hedges. Grows rapidly and can be sheared to any desired form, and always presents a neat, attractive appearance.

This stock will not be taken with ball of earth.

THUYA OCCIDENTALIS (American Arbor Vitæ).—The best and most popular plant used for hedges to-day is the American Arbor Vitæ. Grows compact and furnishes an abundance of foliage. This variety naturally forms a bushy, well-branched tree, and requires but little shearing to give it the proper form. We have an especially fine stock of these suitable for an immediate effect. All move with plenty of fine feeding roots, which insures a quick, healthy growth.

DECIDUOUS HEDGE PLANTS

A well-formed, neatly trimmed hedge is always attractive and ornamental. You can have one with little expense. Start with good plants, in a well-prepared planting-bed and the task is half done. In preparing the ground for hedge planting, add a good fertilizer, spade the soil over good and deep, breaking all hard, heavy lumps, and put in the plants while the soil is still moist. Some of the

Blue Spruce.

Mugho Pine. (See page 9.)

Blue Spruce.

Thorns do well for hedging, but we find the best and most popular plant to be the Barberries.

BERBERRIS VULGARIS (Common Barberry).—The green-leaved Barberry is rapid in growth, and soon produces wood enough with a little shearing to make a good hedge. The branches are covered with thorns, and for this reason it can be used both as a hedge and a barrier to cattle and other stock. After the leaves have fallen in the fall, its branches are covered with bright red berries.

Green Barberry (Hedge Plants)

BERBERIS THUMBERGII (Japanese Barberry).—This pretty little dwarf-growing shrub is by far the most popular of our ornamental hedge plants. Its branches take on a most graceful habit of growth, with foliage of bright tinted green, the leaves are small and rounded. After its leaves have fallen in the autumn, there appears upon the branches, clusters of scarlet berries, which are even more attractive than the foliage. The Japanese Barberry is compact in growth and very hardy. Our stock of these pretty little Japanese Barberry is extra fancy, having been several times transplanted and sheared. This stock will give immediate results.

HARDY FLOWERING SHRUBS

In our list of shrubs we offer nothing but the hardy, free-growing sorts. It does not pay us to grow the tender varieties that kill back to the ground every winter. We dig only such stock as will compare favorably with the standard we uphold in selecting our Evergreens. Our

All Sizes Street and Lawn Trees Dug and Packed with no Extra Charge for Packing Material.

AMERICAN WHITE ELMs. (Page 13.)

prices are low, as low as any of the first-class nurseries ask for their plants. We ship only first quality shrubs, such stock as we know will answer to the description we furnish upon the following pages.

BERBERIS THUMBERGII (Japanese Barberry).—The pretty little Japan Barberry is at present our most popular shrub. Its delicate rounded leaves, together with its graceful habits of growth, make it effective wherever used. Our Japan Barberries are all extra heavy and well developed. Heavy clumps fit for immediate effect. Have been several times transplanted, and move with masses of feeding roots. After the leaves have fallen in the autumn each bush is covered with clusters of the brightest of scarlet berries, which are very attractive. This plant is rapid in growth and very hardy. Can be sheared into any desired form, and for this reason it can be used for low hedging.

Japan Barberry	Each	Dozen	100
2 to 3 feet,	\$0 40	\$ 3 50	\$25 00
1½ to 2 feet,	25	2 50	15 00
10 to 15 inches,	10	1 00	6 00

BERBERIS VULGARIS (Common Barberry).—The Common Barberry is a strong-growing shrub used for mass planting and hedges.

Common Barberry	Each	Dozen
3 to 4 feet,	\$0 35	\$ 3 50
2 to 3 feet,	25	2 50

BERBERIS VULGARIS PURPUREÆ (Purple Barberry).—Fine for planting in groups beside other varieties, the dark purple forming a striking contrast against the green background.

Purple Barberry	Each	Dozen
4 to 5 feet,	\$0 50	\$ 5 00
3 to 4 feet,	35	3 50
2 to 3 feet,	25	2 50

FORSYTHIA FORTUEI.—Very rapid in growth, strong and upright. Covered with masses of deep, green foliage. Desirable for mixed plantings.

Forsythia	Each	Dozen
1½ to 2 feet,	\$0 25	\$ 2 00

HYDRANGEA (Paniculata Grandiflora).—All are familiar with the White Hydrangea, the shrub that gives us those large, round, white flowers during the late summer months when all others have gone. How pretty these flowers can be made to appear if planted in masses or groups. The foliage before the flowers appear is beautiful in itself. The easiest shrub of all to grow. Can be pruned into tree form, if desired.

White Hydrangea	Each	Dozen
2 to 3 feet,	\$0 35	\$ 3 00

PHILADELPHUS CORONARIUS (Mock Orange).—Covered with fragrant

white blossoms. A shrub highly recommended for lawn planting.

Mock Orange	Each	Dozen
2 to 3 feet,	\$0 35	\$ 3 00

SPIRÆA VAN HOUTTEI.—White Spiræa, sometimes called Bridal Wreath. The best known and most widely planted of any shrub. Here is a shrub that never disappoints. It is useless trying to describe the plant when in full bloom, covered with clusters of white flowers, each long, graceful branch covered to the very tip with bloom. Its flowers come early in the spring and stay fresh a long time. We have to offer a limited number of heavy clumps 3 to 5 feet in height. Fine specimen plants, all have been several times transplanted, and come up with all the soil that one man can lift clinging to their roots. If you wish this specimen stock, order early, our supply is limited, and first come first served.

Spiræa Van Houttei	Each	Dozen
2 to 3 feet,	\$0 35	\$ 3 00
1½ to 2 feet,	25	2 00

SYRINGA (The Lilac)

The Lilacs will always be a popular shrub, they are so well adapted for all uses. Its hardiness, rapidity of growth, together with the ease with which it can be handled, makes it a true favorite. We are offering a few of the very best tested varieties, nearly all of which are grafted plants.

SYRINGA CHINENSIS (Rouen Lilac).—(Grafted).—Tall, erect grower; puts forth immense flower clusters. Fragrant, with rich purple coloring.

Rouen Lilac	Each	Dozen
2 to 3 feet,	\$0 35	
1 to 1½ feet,	25	

SYRINGA JAPONICA (Japan Lilac).—(Grafted).—Pale blue, very fragrant. Grown tree-like in form.

Japan Lilac	Each	Dozen
2 to 3 feet,	\$0 35	
1 foot,	20	

SYRINGA VULGARIS (Common Lilac).—We offer some heavy, well-developed clumps of the reliable old purple Lilac. Clumps 7 to 9 feet high. Heavy and well formed.

Common Lilac	Each	Dozen
2 to 3 feet,	\$0 35	

SYRINGA BERTHA DAMMANN.—(Grafted).—Always a free bloomer. Flowers large and single. White.

Bertha Dammann Lilac	Each	Dozen
2 to 3 feet,	\$0 50	

SYMPHORICARPOS RACAMOS-US (White Snow Berry).—An attractive shrub. Covered with small pink flowers during the summer months, and bringing forth clusters of snow-white berries late in the fall. These berries hang upon the bush long into the winter months.

White Snow Berry	Each	Dozen
2 to 3 feet,	\$0 35	

VIBURNUM OPULUS STERILIS (White Snow Ball).—Large, growing shrub, covered with white blossoms.

White Snow Ball	Each	Dozen
2 to 3 feet,	\$0 35	
1½ to 2 feet,	20	

ROSES

CRIMSON RAMBLERS.—Heavy field-grown stock. Such plants as will go right ahead and grow and develop, and in a surprisingly short space of time give you an abundance of bloom. You all know how the Crimson Rambler looks. It is that climbing rose which in the springtime is entirely covered with large clusters of small, bright red roses. The Crimson Rambler is always hardy and extremely rapid in growth. Our first quality field-grown select plants are sure to give the best of satisfaction.

Crimson Ramblers	Each	Dozen
1st quality,	\$0 50	

PAUL NEYRON.—To those not acquainted with the different roses it seems only right that we tell you a little something about this wonderful rose. The Paul Neyron is the largest of all roses, a bright pink in color and very fragrant. It blooms the season through, and is always covered with an abundance of well-formed buds. Our Paul Neyron plants are all heavy, well-formed, field-grown stock that will develop into large specimens. In planting roses see that the soil is made good and rich. Add plenty of good fertilizer. The secret of having good roses is a rich planting bed.

Paul Neyron (Selects)	Each	Dozen
1st quality,	\$0 50	
2d choice,	25	

ANNE DIE DIESBACH.—Of vigorous growth. Color carmine.

Each,	\$0 25
-------------	--------

BARRONNE DE ROTHSCHILDS.—Clear, pale rose color.

Each,	\$0 25
-------------	--------

CROQUETTE DES ALPS.—Pure white, medium size.

Each,	\$0 25
-------------	--------

DUKE OF EDINBURGH.—Bright scarlet, large and full.

Each,	\$0 25
-------------	--------

GENERAL JACQUEMINOT.—Blossoms very large and dull crimson in color. Producing splendid buds.

Each,	\$0 25
-------------	--------

JOHN HOPPER.—Large rose-colored, with crimson center.

Each,	\$0 25
-------------	--------

MARSHALL P. WILDER.—Cherry crimson.

Each,	\$0 25
-------------	--------

PRINCE CAMELLE DE ROHAN.—Another of our roses worthy of special mention. Every one admires those deep, dark, velvety red flowers. Perfectly formed buds and very fragrant. That is the Camelle De Rohan. The bush is not very heavy, nor does it grow to be very large, but it blooms the summer through.

1st quality (select) each,	\$0 35
2d choice,	25

BLANCHA MAREAU.—A pure white moss rose. The moss roses have that delicate, spicy fragrance, and the beautiful moss-covered buds.

Each,	\$0 25
-------------	--------

PRINCESSE ADELAIDE.—Red moss.

Each,	\$0 25
-------------	--------

SEEDLING AND TRANSPLANTED

Price List. For Fall 1907 Only

TREES FOR EVERY PURPOSE.

We grow trees for every purpose. Read our description in the catalog and you will see the kinds we recommend for every purpose. Some kinds are grown for windbreaks, some for hedge fence and others for lawn planting. All are hardy and free from blight. We offer for sale seedlings and transplanted trees.

Seedlings are the young trees still in the seed beds; transplanted are those which have been taken out and replaced either once, twice or three times. Transplanting develops root growth, and makes a stronger, heavier-shaded tree.

A WORD ABOUT OUR STOCK.

Don't compare our nursery-grown stock with wild trees. We grow our stock from seeds. Some varieties are started from cuttings, while some of the choice varieties are carefully grafted in the greenhouse. Nursery grown stock is healthy. It is grown with an abundance of light. The parts form properly. Did you ever see stock sent out by some nurseryman, stock that was long and slender and very light, with only one long, straight root? Such trees are found wild in the woods. Nursery-grown trees are not long and slim and light. Their roots have been made to grow and develop by being frequently transplanted. This stock when taken from our nursery rows and shipped to the purchaser, will grow. It has a stock of feeding roots that will take hold when planted out, and put new life and vigor into the plant. Now choose for yourself which kind of stock you would rather have.

HARDINESS.

Thirty-two years in the nursery business has taught us that people demand hardy stock. Such trees and plants as will stand out unprotected during the long winter months, and not suffer from the effects. Trees that will not only live through the winter, but will be ready to start growing again when the warm spring day appears. People don't want stock that will be frozen back and partly killed every winter. Such trees don't give results, and it is money wasted to buy such stock. We grow hardy stock, and experience has taught us which varieties are best adapted to the different parts of the country. We have made it our business to find out which of our trees give the best results in the different states all over the country. If you don't know, and are undecided, ask us. It is our business to know, and we are only too glad to tell you.

TERMS OF PAYMENT.

All orders must be accompanied by cash, bank draft, express money order or postal money order. Register your letters containing money. It is not safe to send them through the mail unless this is done. Stock is furnished as follows: 5 at 10 rates; 50 at 100 rates; 500 at 1000 rates. Remember, we furnish boxes, packing, moss, burlap, twine, paper, etc., free of charge and delivered to the station, after which our responsibility ceases.

FREIGHT OR EXPRESS.

Be sure to state the manner in which you wish your goods shipped, by freight or express. We use our own judgment when not advised by the purchaser.

FRUIT TREES AND SMALL FRUITS.

First quality fruit trees, that is what we have to offer you. We ship nothing but first quality stock. It does not pay to plant poor, sickly, half-dead trees. They may live, but you will never be satisfied. Get the best. Our first quality fruits are the best. They are trees selected from thousands; they are the strongest, heaviest and the best from the entire block. Such trees live and grow, you get results. Look over the following lists, you will find all of the reliable and standard varieties, such as we care to recommend as being good to plant. In apples we have a few thousand first quality selects, heavy grade trees. In some varieties we can select trees from 1 to 2 inches in diameter, trees that will soon be ready to bear fruit. We dig and pack this stock without extra charge. Order these large sizes at once, they won't last long.

APPLES.

Apples (First Quality)	Each	Dozen	100
Selects, 1½ to 2 inch diameter,	\$0 75	\$ 6 00	\$ 50 00
Heavy, 1 to 1½ inch diameter,	50	4 00	35 00
5 to 6 feet,	35	2 00	15 00

Apples.—Summer varieties: Red Astrachan, Yellow Transparent; fall varieties: Snow, Duchesse, Wealthy; winter varieties: North Western Greening, Ben Davis, York, Imperial, Johnathan, Tolman's Sweet, Wine Sap, Willow Twig.

CHERRIES.

Cherries (First Quality, Selects)	Each	Dozen	100
5 to 6 feet,	\$0 50	\$ 4 50	
3 to 4 feet,	35	3 00	

Montmorency, early and late Richmonds, Dyehouse, Wragg.

PLUMS.

Plums (First Quality)	Each	Dozen	100
5 to 6 feet,	\$0 50	\$ 4 00	

DeSoto, Forest Garden, Wolff, Lombard, Hawkeye, Wild Goose, Green Gage.

PEARS.

Pears (First Quality)	Each	Dozen	100
5 to 6 feet,	\$0 50	\$ 4 00	
4 to 5 feet,	40	3 50	
Flemish Beauty, Keiffier, Beurre D'Anjou, Lincoln.			

PEACHES.

Peaches (First Quality)	Each	Dozen	100
4 to 5 feet,	\$0 40	\$ 3 00	
Crawfords, Hill's Chilli, Elberta, Champion.			

GRAPES.

Grapes,	\$0 20	\$ 1 50	\$ 10 00
Moore's Early, Worden, Concord, Niagara, Pocklington, Agawam, Moore's Diamond, Brighton.			

GOOSEBERRIES.

Currants,	\$0 20	\$ 1 50	\$ 10 00
Red Jacket, Pearl, Downing, Houghton, Industry.			

CURRANTS.

Currants,	\$0 20	\$ 1 50	\$ 10 00
Red.—Dutch, Victoria, North Star, White Grape. Black.—Lee's Prolific, Champion.			

RASPBERRIES.

Raspberries,	\$0 10	\$ 1 00	\$ 3 00
Black.—Tyler, Gregg, Older, Kansas. Red.—Kuthbert, Turner, Loudon.			

Blackberries,		\$ 1 00	\$ 3 00
Snyder, Ancient, Britton, Erie.			

STRAWBERRIES.

Strawberries,		\$ 1 00	\$ 5 00
Our strawberries are strong, field-grown plants and will give satisfaction. Beder-wood, Warfield, Crescent, Bubach, Jessie, Parker Earl, Senator Dunlap and many others of the best and thoroughly tested varieties.			

ASPARAGUS.

Asparagus,		\$ 50	\$ 2 00
Good strong roots. Plant in a mellow piece of soil that has been well fertilized and these plants will give some stalks fit to cut the first year after planting.			

RHUBARB.

Rhubarb,	\$0 10	\$ 1 00	\$ 8 00
The Giant Red variety, from which we furnish strong roots, produces short, heavy stalks very early in the spring.			

SPECIALTIES.

We are offering here a few of our choice, rare evergreens at a reduced price. We find that a medium-sized plant is what the majority of the people want, something that is first class in quality and reasonable in price. Therefore we are making up the following list of choice trees and plants. We would like to have you include one item at least from the following varieties in your order for fall. This stock will please you; it is well grown and No. 1 in every respect. Some are novelties that are new to most buyers of evergreens, and each is in itself valuable and interesting. Some are highly colored, others have peculiar habits of growth which make them attractive.

Grafted Weeping Blue Spruce. —This is one of our choicest ornamental evergreens, with weeping or drooping foliage, very brightest possible color. Branches weep or droop. This little tree will be dug with ball of earth and sewed in burlap. One foot, each,			
			50 cents
Grafted Weeping Norway Spruce. —Same as the Blue only green in color. Taken with ball or earth and sewed in burlap. 6 to 8 inches, each,			
			35 cents
Oriental Spruce. —One of the Japanese Spruces grows very round and compact in outline. Bright green color. We have some fine little plants. Taken with ball of earth and sewed in burlap. 6 to 8 inches, each,			
			35 cents
Sempers Ever Golden Arbor Vitæ. —One of the Japanese variety, which has such delicate foliage, entirely covered with the brightest of golden. We offer you here some well-formed stocky, little plants. 1 foot tall, dug with ball and sewed in burlap, each,			
			50 cents
Small Hardy Yews. —Grow to be six feet across, very attractive and ornamental. Taken with ball and sewed in burlap. 8 inches, each,			
			35 cents
Koster's Grafted Blue Spruce. —The genuine true grafted blue spruce. Stocky, well-formed specimens. Very brightest possible blue. Taken with ball and sewed in burlap. 8 inches, each,			
			50 cents
Golden Siberian Arbor Vitæ. —The golden-leaved Siberian Arbor Vitæ. Perfectly hardy and exceedingly attractive. Taken with ball and sewed in burlap. 8 to 10 inches, each,			
			35 cents
Hoovey's Golden Globe Arbor Vitæ. —A bright, little grafted specimen always green round and compact. Very reliable. 1 foot, each,			
			35 cents
Dwarf English Box. —The pretty little Dwarf English Box grows with bright green foliage. But not hardy in the cold northern states. Stocky and fine, 6 inch plants, per dozen,			
			\$1 00
